

New door control

GEZE Active**Stop**

Suitable for
all lifestyles.

GEZE ActiveStop

Doors can do much more than you can imagine.

Enter your rooms more conveniently than ever before:

The GEZE Active**Stop** door damper can stop doors gently, close them quietly and keep them open with ease. It means slamming doors, trapped fingers and defects in walls or furniture are a thing of the past. Thanks to two different designs, the door damper can either be pre-installed or retrofitted with the greatest of ease. Using GEZE Active**Stop**, you can combine functionality, safety and aesthetics – and experience an entirely new door control.

Choose the right version for your door situation:

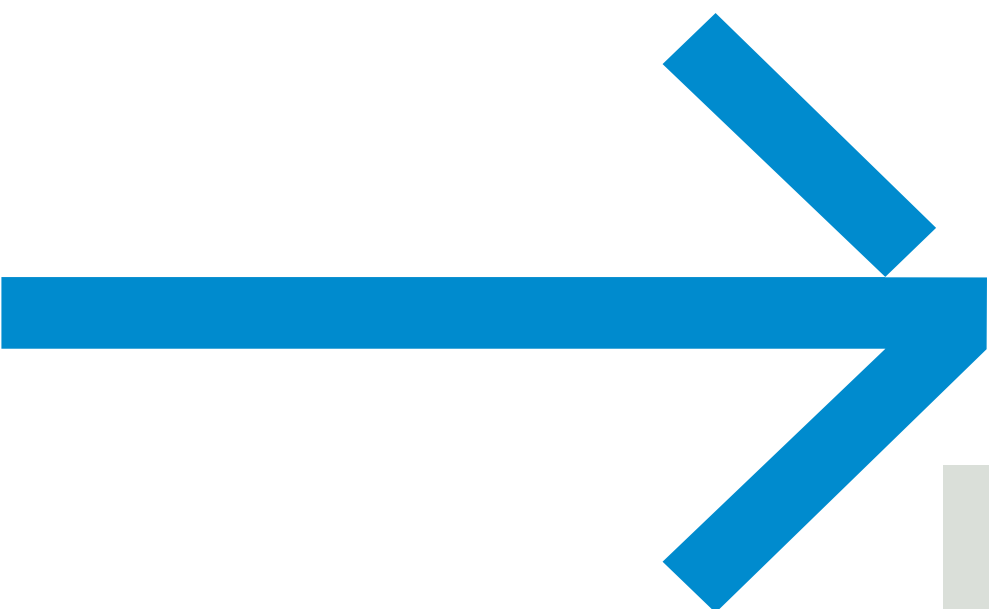

Conforms to the most demanding design requirements: the integrated GEZE Active**Stop** for timber doors.

Extremely easy to install: the surface-mounted GEZE Active**Stop** for timber and glass doors.

GEZE ActiveStop

Three functions for greatly enhanced control and safety:

Silent closing

Thanks to the active damping, the door closes slowly and completely silently. GEZE Active**Stop** not only prevents loud banging and irritating door damage, but also minimises the risk of injury.

Keeping open with ease

GEZE ActiveStop keeps the door open to prevent it from slamming. Separate door stoppers are no longer needed. The holding position can be set individually using the adjustable opening angle.

Gentle stopping

Damaged walls or furniture behind doors are not only unsightly, but most of all unnecessary. GEZE ActiveStop brakes the swing upon opening and stops the door in the desired position.

Discover
the advantages
of GEZE Active**Stop**

Gentle stopping

With GEZE Active**Stop**, you will never again have to deal with annoying wall and furniture damage caused by doors. The intelligent damper brakes doors in time, even when opened with full swing. But it can do much more. Following the smooth braking, GEZE Active**Stop** opens the door independently and safely up to the individually adjustable holding position. This protects objects behind the door – even if sometimes your hands are full.

“

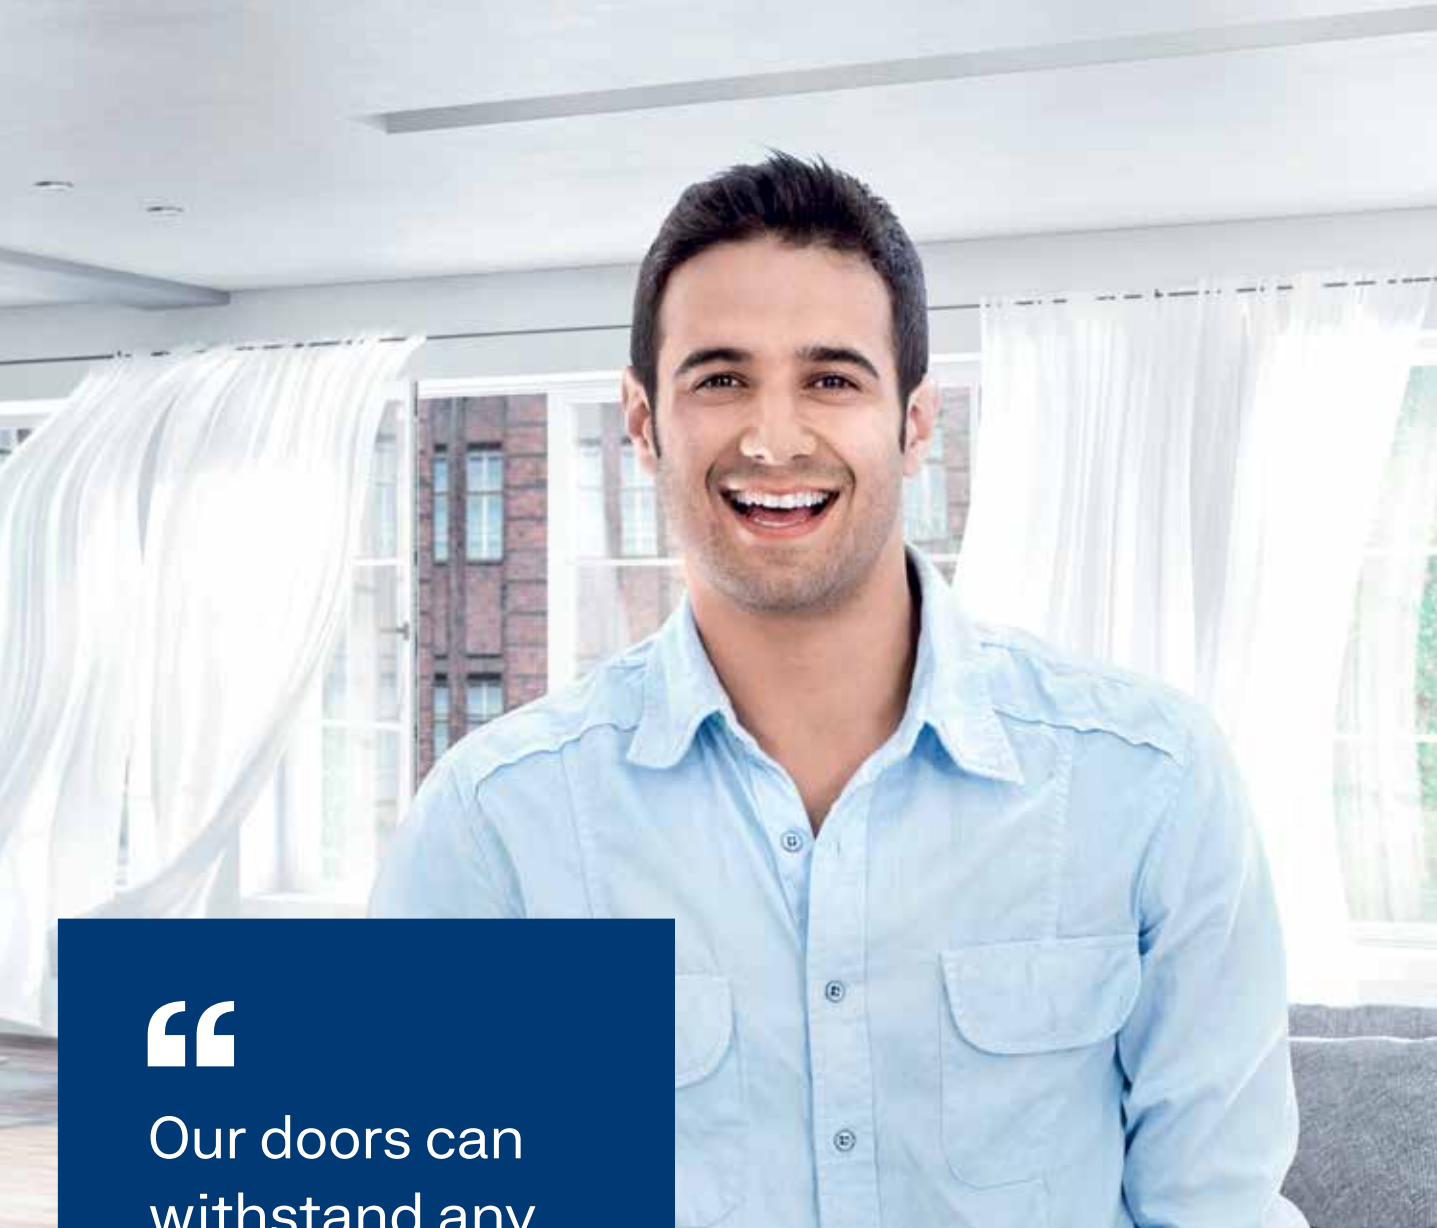

Our doors always
stop in time.
Even if some-
times my hands
are full.

Keeping open with ease

When there is a strong draught during airing, doors quickly move and start slamming uncontrollably. GEZE Active**Stop** actively intervenes, keeping the doors open in the desired position without any aids. You can do without additional door stopper on the wall or on the floor – irrespective of how many windows are open.

“

Our doors can
withstand any
draught.

Silent closing

Irritating slamming doors are a thing of the past. GEZE Active**Stop** ensures peace and quiet in the house. The active damping also brakes quickly shutting doors gently, and then pulls them closed silently. The slow closing not only reduces the noise level. It protects door leaves and frames, minimises the risk of injury – and makes family life more relaxed.

“

The door to my room is much, much, much too silent.

GEZE ActiveStop INTEGRATED

Pre-installed and virtually invisible. Ideal for new buildings or when installing new doors.

GEZE ActiveStop SURFACE-MOUNTED

Easy to install, and can be removed without leaving any residue. Perfect for retrofitting existing doors.

GEZE ActiveStop

Greater comfort in your home.

Functional door damper without compromise.

CAN BE USED ANYWHERE

GEZE ActiveStop can be used with timber or glass doors up to 45 kg, depending on the design. In other words, with practically all standard doors.

INDIVIDUALLY ADJUSTABLE

You can adjust how far your door should open and how strongly GEZE ActiveStop should damp it on opening and closing as needed and based on your home situation.

RELIABLE OVER THE LONG TERM

GEZE ActiveStop is the product of durable and long-lasting workmanship "Made in Germany". The door damper offers unlimited top quality with functionality, safety and aesthetic design.

0°

Safe closing and convenient opening

GEZE ActiveStop keeps the door closed. You can avoid lock latches and handles, and design your door freely. The door can be pushed open easily without a latch, even when your hands are full.

25°

Door damping and closing in closing direction

The closing door is gently braked from an angle of 25° and automatically pulled closed.

The opening angle is also the holding position and can be continuously adjusted.

Timber doors: 80°–140°
Glass doors: 80°–110°

60°

Free swing between
25° and 60°

GEZE ActiveStop allows your door free movement over this range. And regardless of how much swing the door has – the damping catches it reliably and safely from 25° or 60°.

110°/140°

Door damping and closing in
opening direction

From an angle of 60°, the opening door is gently braked and automatically pulled open – up to the individually adjustable opening angle of max. 140° (110° for glass doors).
